Hello

water is virtually irreplaceable. Polluted water is difficult to clean and make it safe to drink, in the meantime, what are pollutants doing to the fish and other water life.

It's a simple request to keep Buffalo river watershed clean and pollution free of CAFO lots.

Too many corporations have polluted our lakes and rivers for ease of discharging their pollution. Let's keep our environmental quality...naturally clean.  
Thank you for your time, attention and result of keeping AR ...the natural state.
