Follow Up Flag: Follow up
Flag Status: Flagged

- Prior to the drilling, please reveal what steps ADEQ will take if hog waste is discovered in the soil or bedrock underneath.
- Drill to 120 feet as has been recommended rather than just 100 feet you have announced.
- Drill three bore holes rather than just one. Citing added cost is not credible; the main cost is getting the equipment to the site.
- If you do allow BCRET to have an observer on site during drilling, then allow BRWA's preferred expert, Dr. Bert Fischer, to also be on site.
- Conduct dye tracing using the completed bore hole before it is filled back in, while the above indicated observers are on site.

You must do everything possible to ensure there is no leakage into the ground water. Once the well is poisoned you can't unpollute it!!!
