Subject: Investigatng C&H Pond Problems

To reassure the public, please follow the experts advice and drill three bores to the recommended depth of 120 feet. This has been handled so poorly by ADEQ, that it would help restore some faith in the department that is suppose to protect our natural resources.
Also, BRWA should have their expert invited to observe during the testing. This will make the process more transparent to the public.
Thank you,
Jane Winston
