Subject: Investigatng C&H Pond Problems - comments closed

I have concerns about specifics of water quality testing that are not acceptable, such as shallow drilling depth, lack of more than one core boring, questions raised about who can and can't observe this process, lack of planned dye tracing, and no announced plans for consequences if hog waste is found in the soil or bedrock.

We need to protect our treasured Buffalo River, and we need sound scientific information.

Thank you.
