RE: Release of C&H Drilling field notes and data logs

The Buffalo River Watershed Alliance would like to express our appreciation for the efforts that ADEQ has taken to conduct an independent unbiased investigation. We would have preferred some additional bore holes to enhance the credibility of the forthcoming results; none the less we look forward to the final report.

In the meantime, we would appreciate immediate access to the following documentation:

- Field notes and field observations
- Geophysical data logs
- Equipment calibration logs
- Ground water sampling data sheets
- Pertinent site photographs
- Latitude/longitude coordinates of bore hole
- List of personnel present

In the interest of transparency, we suggest posting all of the above on ADEQ's web site. If the web site will take much time, then we would appreciate copies. It is our understanding that access to static logs and notes as described above is generally viewed as standard protocol.

Sincerely,

Gordon Watkins

President BRWA
