Please extend the deadline for public comment from December 9 to December 23.

The split sample data in numerous instances listed specific values for E Coli, TOC and CaCO₃ that were report as <

the reporting limit.

I would like to know the specific values for all these < samples.

Who at ADEQ will prepare and accept responsibility for the final report, conclusions and recommendations?

Will that individual have professional accreditation (PE) licensing appropriate to the issues involved?

When will the final report be provided to the public.

Donald Franklin
