Re: Drilling study by Harbor Environmental

Please let me know if Harbor Environmental found hog waste was, or was not, leaking from the storage ponds at C&H.

I've read that the 400+ page report submitted to your department did not have a conclusion on this question, which is confusing, since that seemed to be the object of funding the study.

Is it common for a study to be done by a firm like Harbor Environmental and no conclusions be offered at the end of over 400 pages of written data?

Thank you for helping me understand this situation.
