Good Morning, Sarah,

I just downloaded the AR 2016 Draft 303d List and am experiencing some trouble tracking a couple of assessment units. Specifically, I am looking at impairments within Buffalo National River. The assessment units that I am interested in are AR-4J-11010005-027 (Big Creek) and AR-4J-11010005-001 (Buffalo River).

According to my database, AR-4J-11010005-027 has a Dissolved Oxygen 303d impairment in 2014 and AR-4J-11010005-001 is impaired for temperature.

Thank you for your help!

Regards,  
Jia

Hi Jim - thank you for the detailed response. It is greatly appreciated and exactly what I needed.

Thank you both for responding so promptly!

Regards,  
Jia

Jia Ling,

11010005-001-Lower Buffalo River, site name BUFR09, was listed as impaired for temperature in 2010, but was delisted in 2012.

11010005-027-Big Creek, site name BUFT18, was on the 2014 list for dissolved oxygen in 2014, but is on the removed listings (draft) for 2016.

The 2010, 2012, and 2014 303(d) lists have yet to be approved by EPA. Each one will have be reviewed and approved by EPA in chronological order.

I hope this helps.

Jim Wise
