Questions Comments:

Regarding the designation of both Big Creek and two sections of the Buffalo River as impaired, I would ask you to change these from Category 4b to Category 5. Category 5, as I understand it, allows for a total maximum daily load to be established for these bodies of water and also allows point source pollution to be addressed. I think that this change is necessary in order to further determine the causes as well as the remedies of this impairment. The Buffalo River's water management plan is not sufficient to protect the river and we need to have these water bodies put into Category 5 impairment to better address the problems. Thank you.
