Ladies and Gentlemen,

The Buffalo River is a National treasure, Arkansas is entrusted to keep the beauty and health of this river. Karst geology and excess hog waste is destroying this river. Big Creek flows into the Buffalo, not only is Big Creek being polluted by the hog farm but the pollution is beyond the capacity of the buffalo to dilute it. The Category of both Big Creek and the Buffalo should be 5, not 4b.

The hog farm should not be allowed to operate if the waste is spread on fields that are in the watershed of the Buffalo River.

Do you want to tell the people of Arkansas and potential tourist that our river is not safe for you and your children to swim in and don't float it you maybe exposed to e coli and other sickening bacteria.

Do the right thing!

Sincerely,

Charles Transue P.E.
