Dear Arkansas Department of Environmental Quality,

As a resident of Little Rock for the past 42 years I have seen firsthand that Fourche Creek is polluted. But the Arkansas Department of Environmental Quality's (ADEQ) latest assessment does not accurately reflect the problems Fourche faces. Because it is definitely an impaired waterway I call on the ADEQ to revise its assessment of Fourche Creek and raise it to a higher priority for addressing pollution.

Citing Audubon Arkansas's assessment I believe that Fourche Creek water quality data should be reexamined and Fourche Creek potentially assigned a higher priority for the following reasons:

1. Until the 2016 303(d) list, Reach 22, from the confluence of Rock Creek and Fourche Creek to the Arkansas River, had been listed as impaired for not meeting the designated use for aquatic life/fisheries. In the 2016 303(d) list, no designated uses were listed as impaired and the 2018 303(d) list Reach 22 was not listed as impaired. Unless there are data to support delisting, Reach 22 should be listed as impaired.
2. In the 2008 303(d) list, Reach 24 and 22 were listed as impaired because the designated uses primary contact and aquatic life were not met. In addition, the priority ranking for aquatic life in Reach 22 was high (Category 5a). A Category 5a in 2008 warranted a TMDL. A TMDL should be set and aquatic life should still be listed as not supported.
3. The source of contaminants has been identified as unknown and/or surface erosion. Given the urban nature of the creek and the astonishing amount of trash in the creek, urban runoff clearly should be listed as a source of contaminants.
4. Primary and secondary contact uses should be listed as not being supported because of pathogenic indicator bacteria. During major floods sewer main lids in the floodplain pop so raw sewage is released directly into the creek. Data collected by the Friends of Fourche Creek in 2016 show that E. coli counts spike after storm events.

I care about the water quality of Fourche Creek, and want to see it improved, but first ADEQ needs to conduct an accurate assessment for the 2018 303(d) list. Fourche Creek is a high priority to me and should be to ADEQ as well.

Sincerely,  
Mr. David McCullough
