Subject: Comments on the proposed list of 303d impaired waterways
Date: Sunday, August 5, 2018 11:02:07 PM

Big Creek and the Buffalo River should be placed in Category 5 of the 303d List of Impaired Waterbodies due to the overwhelming algae bloom on the Buffalo River. ADEQ should identify the sources of impairment and take corrective action.

I encourage all members of ADEQ or any state employee involved to expose any corruption, concealing pertinent facts or information and to honestly report how C and H hog farm is contaminating the river. Paychecks and pension will not matter on a dying planet with poisoned water.

Please do the right thing and protect the waters of Arkansas.
