Comments for the list. They discuss algae but they also mention impairment.

Questions Comments:

Big Creek and Buffalo River. Since the take over of the river by the NPS there has always been the algae. Even 50 years ago at Kyles landing there was algae. There is no need to list either as impaired. I live here and 90% of the complainers never lived here they just visit once or twice a year. The Rivers are at record low water this year lack of rainfall. Is there a comparison with any other water sheds in the Ozarks? Was there studies done when the park service took over in 1972?
