Questions Comments:

I am asking you to not place Big Creek on the 303 list. Please use scientific evidence and not the irrational fears of certain individuals when considering this placement. It doesn't belong there and they know it. Despite their best efforts, I find it extremely troubling to think that ADEQ is leaning on any advice from the watershed Alliance. They are biased. Water Test should be done by unbiased parties period. During the summer, all the creeks get low and grow algae, even before the hog farm was there, it is normal.
